Hello Cynthia,

Good Morning and thank you for your quick response. Please make note that Laura Wickham is no longer employed with the State of Nevada/Governor's Office of Energy. For all future reports please send to both: Info@energy.nv.gov AND RDoubinkine@energy.nv.gov.

Kindest Regards,

Jeanne

Jeanne Stoneman

WARNING - This email originated from outside the State of Nevada. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Good morning!

The last Renewable Portfolio Standard Compliance Reports that we sent to your offices was on June 1, 2023. Note that both these reports were emailed to Laura Wickham as we've done in past years. Please see attachments for the emails and reports and let us know if you need anything else.

Thank you,

Cindy Capmany

Subject: {External} Annual RPS compliance report

Good afternoon,

A constituent reached out to our office to ask for the most recent Renewable Portfolio Standard Compliance Report for the Silver State Energy Association. The last report provided to the Nevada Governor's Office of Energy was in 2021:

https://energy.nv.gov/uploadedFiles/energynvgov/content/Pages/SSEA_rps_report_2021.pdf

As I was unfamiliar with this report, I wanted to ask if you or someone at your agency is aware of it, and if they could provide more clarity on how that report is submitted to our office. It appears this report is required annually by NRS, and we want to make sure we are following through with our statutory duties:

- **NRS 704.78253 Reports by certain providers not subject to jurisdiction of Commission.**
A provider of electric service that is subject to [NRS 704.787](#) shall, on or before July 1 of each year, submit to the Director of the Office of Energy appointed pursuant to NRS 701.150 a report that contains the information described in subsection 4 of [NRS 704.7825](#).

Please let us know if you can assist us further, or if we need to address this question to someone else with the Silver State Energy Association. Thank you.

Matthew McDaniel

SILVER STATE ENERGY ASSOCIATION

Renewable Energy Report

Submitted to the Nevada Office of Energy

for calendar year 2022

Silver State Energy Association (SSEA) is pleased to provide this renewable energy report for calendar year 2022 to the Nevada Office of Energy as per Senate Bill 358 (SB 358) passed in 2019.

With the exception of the Southern Nevada Water Authority (SNWA), all of the members of the SSEA are electric utilities who resell the electricity to their own customers and have their own reporting obligations under SB 358. As such, SSEA will only be reporting sales made to one of its members, SNWA.

The structure of the SSEA is such that the SSEA provides electricity to its members to meet their needs. This is done through generic power transactions which are not specific to any type of generating source and therefore do not qualify as “renewable energy” under SB 358.

In order to achieve the Renewable Portfolio Standard established by SB358, SSEA has 1) procured, or received by assignment, Nevada Portfolio Credits (PECs) from SNWA; and 2) procured, or received by assignment, renewable energy attributes associated with federal hydropower production from SNWA.

The information provided in this report is as required under SB 358, which is from NRS 704.7825 subsection 4:

a) The amount of electricity which the provider generated, acquired or saved from portfolio energy systems or efficiency measures during the reporting period and, if applicable, the amount of portfolio energy credits that the provider acquired, sold or traded during the reporting period to comply with its portfolio standard.

All of the electricity that SSEA sells to SNWA is from generic wholesale market purchases, which do not qualify as “renewable energy” under SB358. SNWA receives federal hydropower and has assigned the renewable energy attributes to SSEA for purposes of compliance with SB 358. SNWA also owns Nevada certified PECs from renewable energy resources it owns and from certified energy efficiency projects.

As a provider, SSEA acquired 138,016 MWh of renewable energy attributes from SNWA from federal hydropower and 59,269 MWh of PECs from various other renewable energy

resources. SSEA also utilized 19,679 MWh of PECs from SNWA's 2021 surplus PEC inventory. See table at the end of this report.

- b) The capacity of each renewable energy system owned, operated, or controlled by the provider, the total amount of electricity generated by each such system during the reporting period and the percentage of that total amount which was generated directly from renewable energy;*

SSEA does not sell any electricity to SNWA from generating resources that it owns, operates, or controls. All of its sales are from generic wholesale market purchases. The table at the end of this report shows the information requested by this item for SNWA's renewable energy resources, which is the source of SSEA's renewable energy attributes for compliance with SB 358. One hundred percent of the energy generated by these resources was from renewable energy.

- c) Whether, during the reporting period, the provider began construction on, acquired or placed into operation any renewable energy system and, if so, the date of any such event;*

SSEA did not begin construction, acquire, or begin operation of any renewable energy system during 2022.

- d) Whether, during the reporting period, the provider participated in the acquisition or installation of any energy efficiency measures and, if so, the date of any such event; and*

SSEA did not participate in any energy efficiency measures during 2022.

- e) Any other information that the Nevada Office of Energy may deem relevant.*

SSEA has no additional information that seems relevant.

PROVIDER = SSEA				
YEAR = 2022				
	Renewable Energy		PECs or Renewable Energy Attributes	
Customer-Owned Supply (SNWA)	Capacity (kW)	Generation (MWh)	Produced (MWh)	assigned to SSEA (MWh)
